Client-Side Pros

1. Allows for cool & progressive user interactions/animations
2. Interact with temporary storage
3. Styling, layout, manipulating UI elements
4. Can save network bandwidth
5. Get data from servers

Client-Side Cons

1. Browser incompatibilities
2. Same-domain policy; security limits
3. User inputs cannot be trusted (and client-side validation is a moot point)

Server Side Pros

1. Processing and sanitizing user input
2. No restrictions on same domain policy
3. Can interact with permanent storage (e.g. SQL)
4. Generating dynamic content
5. Managing & maintaining business rules
6. Availability and accessibility

Server-Side Cons

1. Bandwidth and performance issues can arise
2. A whole new side of security
3. Expense $$
